LOSE WEIGHT WITH

FLEX LT™

INTEGRATED MOUNT

Our FlexLT™ integrated mount is a modified in-position plate, available in any thickness. These flexo plates are lightweight, safe, easy to handle and can allow for faster run speeds.

Safe & Easy Handling:

FlexLT™ plates are lighter, so they are easy and safe to handle – fewer damaged plates and injured operators. FlexLT™ lends itself to multi-out corrugate items with uneven graphic coverage such as trays, lids, and wraps.

Faster Set-Up, Faster Run:

The lightweight attribute makes these plates easy to mount and therefore faster to set up. The weight reduction also contributes to the prevention of on-press vibration and the resulting print defects that can occur with a thick, heavy, oversized flexo plate. Reducing the weight of the entire plate mount will allow the press to run at top speeds.

Image areas are processed “in position” on a backing sheet, then individually mounted to a carrier. No excess floor in non-image areas means we use less photopolymer and you use a lighter plate.

Maintain Flexibility:

FlexLT™ plates do not have any unnecessary floor, so not only are we reducing materials, we are maintaining flexibility for future copy changes. We can easily demount and slug in new graphics.

More Sustainable:

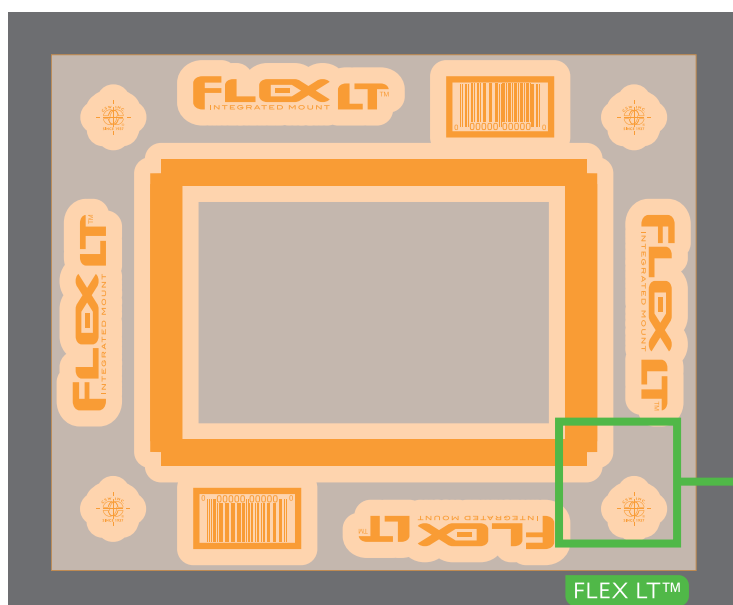

The liquid photopolymer process does not use solvent. Moreover, any excess liquid photopolymer is reclaimed and re-used, making FlexLT™ an environmentally responsible option.
